Re: Tier III Certification of Design Documents for the TARR Centrum Innowacyjnosci sp. z.o.o. –
EXEA Data Center

Dear Mr. Kozlowski,

Uptime Institute Professional Services is pleased to announce the Tier Certification of Design Documents for the TARR Centrum Innowacyjnosci sp. z.o.o. – EXEA Data Center as fulfilling Tier III Concurrently Maintainable criteria. This Certification is based upon the design documentation submitted between 30 April 2014 and 15 August 2014.

This Certification recognizes the TARR Centrum Innowacyjnosci sp. z.o.o. – EXEA Data Center design, as supporting any planned work on the site infrastructure without disrupting operations for the design stated critical IT load of 1,600 kW. This design critical load comprises four distinct critical areas: Server Rooms S1, S2, S3, and S4. Each of the four Server Rooms are certified for a design stated critical IT load of 400 kW.

Tier III Concurrently Maintainable criteria are founded on the capability to complete planned facility maintenance or modifications on a scheduled basis; equipment failures or distribution path faults may lead to unplanned outages. Certain operator errors, such as procedural errors during reconfiguration of the redundant computer room or site infrastructure equipment, may also impact the critical load.

This Tier Certification is based on the 100% design documents as submitted for review and makes no assurances as to the constructed environment. This Tier Certification is valid until the design is modified, including any changes to the capacity components or distribution paths depicted in the design identified above and submitted for review. This Certification is subject to the limitations set forth in Schedule I, attached hereto and incorporated herein.

Congratulations on this achievement.

Sincerely,

Christopher Brown
Global Tier Authority
