Re: Tier III Certification of Constructed Facility for the TARR Centrum Innowacyjnosci sp. z.o.o.  
– EXEA Data Center Phase 1 & 2

Dear Mr. Kozłowski,

Uptime Institute Professional Services is pleased to announce the Tier Certification of Constructed Facility for the TARR Centrum Innowacyjnosci sp. z.o.o. – EXEA Data Center Phase 1 & 2 in Torun, Poland, as fulfilling Tier III Concurrently Maintainable criteria. The Tier Certification is based on the design and on-site verification visits of the constructed facility completed 7 August 2015 and 29 October 2015.

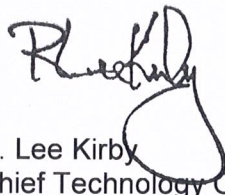

This Certification recognizes the TARR Centrum Innowacyjnosci sp. z.o.o. – EXEA Data Center Phase 1 & 2 as supporting any planned work on the site infrastructure without disrupting computer room power and cooling capacity. This Tier III Certification is based on a total IT load of 800 kW. This load is split between two critical areas; 400 kW for Server Room 1 and 400 kW for Server Room 2

Tier III Concurrently Maintainable criteria are founded on the capability to complete planned facility maintenance or modifications on a scheduled basis; equipment failures or distribution path faults may lead to unplanned outages. Certain operations-related errors (such as procedural errors during reconfiguration of redundant systems, components, or site infrastructure equipment) may still impact the critical load. This Certification is subject to the limitations set forth in Schedule I hereto and incorporated herein.

This Tier III Certification of Constructed Facility represents the culmination of TARR Centrum Innowacyjnosci sp. z.o.o.'s investment and commitment to site uptime availability.

Congratulations on this significant achievement.

Sincerely,

R. Lee Kirby  
Chief Technology Officer
